

Backflip Provisioning Center for Axway MFT/B2Bi

A secure, self-service solution for trading partner onboarding and file route provisioning.

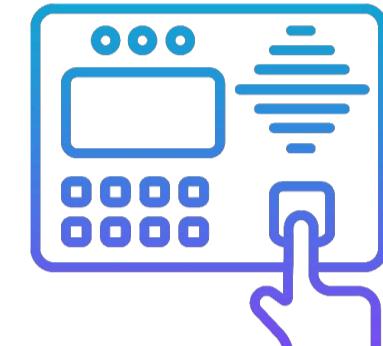

Product Overview

Backflip's Provisioning Center is a self-service orchestration app that integrates seamlessly with Axway MFT/B2Bi. It streamlines the onboarding of trading partners and creation of file routes through configurable workflows, robust admin controls, and automation—drastically reducing time and errors in provisioning.

Target Users

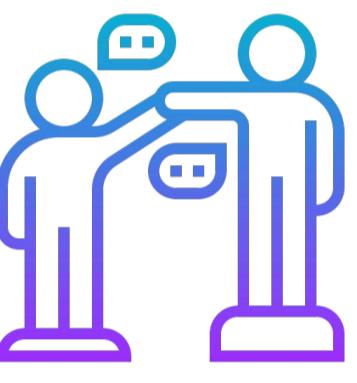

- Business Analysts managing file exchange processes
- MFT Administrators responsible for partner onboarding
- IT Operations and Compliance Teams

Axway Integration

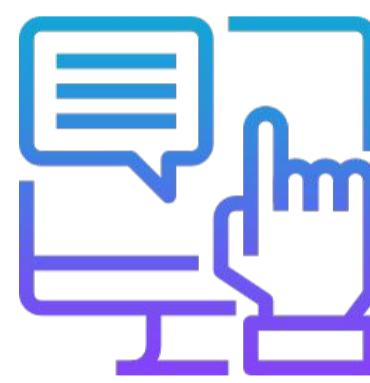

- Seamless integration with Axway SecureTransport using standard APIs for all partner onboarding and file route management actions

Key Benefits

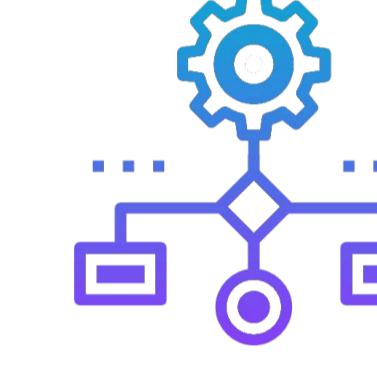

50% Faster Partner Onboarding

Self-service forms and automated workflows dramatically cut down provisioning time

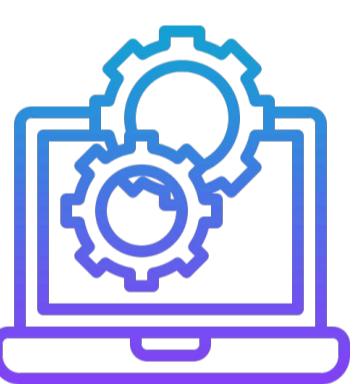

Automated File Route Provisioning

Minimize manual errors with one-click setup via MFT APIs.

Compliance Enforcement

Metadata capture for PII, GDPR, HIPAA during the route setup helps in compliance enforcement

Secure Role-Based Workflows

Ensure approvals and access control by business unit

Unified Test & Production View

Promote routes with confidence using side-by-side views

Legacy MFT Sync

Manage existing and new routes in a single interface

Integrated with ITSM & SSO

Supports ServiceNow and Okta for workflow and authentication

Use Cases

Streamlined Partner Onboarding

At a large insurance company, the onboarding of hundreds of partners and their unique file routes is fully automated. Business users are empowered to initiate onboarding requests, while IT retains control through approval workflows and automated provisioning, ensuring both speed and governance.

Efficient Partner Account Management

At a large transportation company, partner account updates and new route setups are streamlined across complex logistics networks. Legacy accounts synchronization and unified views enable efficient management of test-to-production workflows, ensuring smooth and scalable partner file transfer operations.
